PART ONE
THE DESIRE CALLED UTOPIA

Introduction: Utopia Now

Utopia has always been a political issue, an unusual destiny for a literary form: yet just as the literary value of the form is subject to permanent doubt, so also its political status is structurally ambiguous. The fluctuations of its historical context do nothing to resolve this variability, which is also not a matter of taste or individual judgment.

During the Cold War (and in Eastern Europe immediately after its end), Utopia had become a synonym for Stalinism and had come to designate a program which neglected human frailty and original sin, and betrayed a will to uniformity and the ideal purity of a perfect system that always had to be imposed by force on its imperfect and reluctant subjects. (In a further development, Boris Groys has identified this domination of political form over matter with the imperatives of aesthetic modernism.)¹

Such counterrevolutionary analyses – no longer of much interest to the Right since the collapse of the socialist countries – were then adopted by an anti-authoritarian Left whose micropolitics embraced Difference as a slogan and came to recognize its anti-state positions in the traditional anarchist critiques of Marxism as Utopian in exactly this centralizing and authoritarian sense.

Paradoxically, the older Marxist traditions, drawing uncritical lessons from Marx and Engels' historical analyses of Utopian socialism in *The Communist Manifesto*,² and also following Bolshevik usage,³ denounced its Utopian competition as lacking any conception of agency or political strategy, and characterized Utopianism as an idealism deeply and structurally averse to the political as such. The relationship between Utopia and the political, as well as questions about the practical-political value of Utopian thinking and the

1 Boris Groys, *The Total Art of Stalinism* (Princeton, 1992 [1988]).

2 See Karl Marx and Friedrich Engels, *The Communist Manifesto*, Section III, "Socialist and Communist Literature"; and see also Friedrich Engels, "Socialism Utopian and Scientific". Yet Lenin and Marx both wrote Utopias: the latter in the *Civil War in France* [1871], the former in *State and Revolution* [1917].

3 The so-called "theory of limits" or "theory of nearer aims" ("teoriya blizhnego pritsela"): see Darko Suvin, *Metamorphoses of Science Fiction* (New Haven, 1979), pp. 264–265.

identification between socialism and Utopia, very much continue to be unresolved topics today, when Utopia seems to have recovered its vitality as a political slogan and a politically energizing perspective.

Indeed, a whole new generation of the post-globalization Left – one which subsumes remnants of the old Left and the New Left, along with those of a radical wing of social democracy, and of First World cultural minorities and Third World proletarianized peasants and landless or structurally unemployable masses – has more and more frequently been willing to adopt this slogan, in a situation in which the discrediting of communist and socialist parties alike, and the skepticism about traditional conceptions of revolution, have cleared the discursive field. The consolidation of the emergent world market – for this is really what is at stake in so-called globalization – can eventually be expected to allow new forms of political agency to develop. In the meantime, to adapt Mrs Thatcher's famous dictum, there is no alternative to Utopia, and late capitalism seems to have no natural enemies (the religious fundamentalisms which resist American or Western imperialisms having by no means endorsed anti-capitalist positions). Yet it is not only the invincible universality of capitalism which is at issue: tirelessly undoing all the social gains made since the inception of the socialist and communist movements, repealing all the welfare measures, the safety net, the right to unionization, industrial and ecological regulatory laws, offering to privatize pensions and indeed to dismantle whatever stands in the way of the free market all over the world. What is crippling is not the presence of an enemy but rather the universal belief, not only that this tendency is irreversible, but that the historic alternatives to capitalism have been proven unviable and impossible, and that no other socio-economic system is conceivable, let alone practically available. The Utopians not only offer to conceive of such alternate systems; Utopian form is itself a representational meditation on radical difference, radical otherness, and on the systemic nature of the social totality, to the point where one cannot imagine any fundamental change in our social existence which has not first thrown off Utopian visions like so many sparks from a comet.

The fundamental dynamic of any Utopian politics (or of any political Utopianism) will therefore always lie in the dialectic of Identity and Difference,⁴ to the degree to which such a politics aims at imagining, and sometimes even at realizing, a system radically different from this one. We may in this follow Olaf Stapledon's space-and-time travelers, who gradually become aware that their receptivity to alien and exotic cultures is governed by anthropomorphic principles:

At first, when our imaginative power was strictly limited by experience of our own worlds, we could make contact only with worlds closely akin to our own.

4 See G.W.F. Hegel, *Encyclopedia Logic*, Book Two, "Essence" (Oxford, 1975 [1817]).

Moreover, in this novitiate stage of our work we invariably came upon these worlds when they were passing through the same spiritual crisis as that which underlies the plight of *Homo sapiens* today. It appeared that, for us to enter any world at all, there had to be a deep-lying likeness or identity in ourselves and our hosts.⁵

Stapledon is not strictly speaking a Utopian, as we will see later on; but no Utopian writer has been quite so forthright in confronting the great empiricist maxim, nothing in the mind that was not first in the senses. If true, this principle spells the end, not only of Utopia as a form, but of Science Fiction in general, affirming as it does that even our wildest imaginings are all collages of experience, constructs made up of bits and pieces of the here and now: “When Homer formed the idea of *Chimera*, he only joined into one animal, parts which belonged to different animals; the head of a lion, the body of a goat, and the tail of a serpent.”⁶ On the social level, this means that our imaginations are hostages to our own mode of production (and perhaps to whatever remnants of past ones it has preserved). It suggests that at best Utopia can serve the negative purpose of making us more aware of our mental and ideological imprisonment (something I have myself occasionally asserted⁷); and that therefore the best Utopias are those that fail the most comprehensively.

It is a proposition which has the merit of shifting the discussion of Utopia from content to representation as such. These texts are so often taken to be the expressions of political opinion or ideology that there is something to be said for redressing the balance in a resolutely formalist way (readers of Hegel or Hjelmslev will know that form is in any case always the form of a specific content). It is not only the social and historical raw materials of the Utopian construct which are of interest from this perspective; but also the representational relations established between them – such as closure, narrative and exclusion or inversion. Here as elsewhere in narrative analysis what is most revealing is not what is said, but what cannot be said, what does not register on the narrative apparatus.

It is important to complete this Utopian formalism with what I hesitate to call a psychology of Utopian production: a study of Utopian fantasy mechanisms, rather, and one which eschews individual biography in favor of historical and collective wish-fulfillment. Such an approach to Utopian fantasy

5 Olaf Stapledon, *The Last and First Men/Star Maker* (New York, 1968 [1930, 1937]), p. 299. The English novelist Olaf Stapledon (1886–1950), whose two most important works, just cited, will be discussed in Chapter 9 below, derives from what may be called the European art tradition of H.G. Wells’ “scientific romances” or speculative fiction, rather than from the commercial pulps in which American SF emerged.

6 Alexander Gerard, *Essay on Genius*, quoted in M.H. Abrams, *The Mirror and the Lamp* (Oxford, 1953 [1774]), p. 161.

7 See Part Two, Essay 4.

production will necessarily illuminate its historical conditions of possibility: for it is certainly of the greatest interest for us today to understand why Utopias have flourished in one period and dried up in another. This is clearly a question that needs to be enlarged to include Science Fiction as well, if one follows Darko Suvin,⁸ as I do, in believing Utopia to be a socio-economic sub-genre of that broader literary form. Suvin's principle of "cognitive estrangement" – an aesthetic which, building on the Russian Formalist notion of "making strange" as well as the Brechtian *Verfremdungseffekt*, characterizes SF in terms of an essentially epistemological function (thereby excluding the more oneiric flights of generic fantasy) – thus posits one specific subset of this generic category specifically devoted to the imagination of alternative social and economic forms. In what follows, however, our discussion will be complicated by the existence, alongside the Utopian genre or text as such, of a Utopian impulse which infuses much else, in daily life as well as in its texts (see Chapter 1, below). This distinction will also complicate the very selective discussion of SF here, since alongside SF texts which deploy overtly Utopian themes (as in Le Guin's *Latbe of Heaven*) we will also reference works which, as in Chapter 9, betray the workings of the Utopian impulse. In any case, "The Desire Called Utopia", unlike the essays collected in Part Two, will deal mainly with those aspects of SF relevant to the more properly Utopian dialectic of Identity and Difference.⁹

All these formal and representational questions lead back to the political one with which we began: but now the latter has been sharpened into the formal dilemma of how works that posit the end of history can offer any usable historical impulses, how works which aim to resolve all political differences can continue to be in any sense political, how texts designed to overcome the needs of the body can remain materialistic, and how visions of the "epoch of rest" (Morris) can energize and compel us to action.

There are good reasons for thinking that all these questions are undecidable: which is not necessarily a bad thing provided we continue to try to decide

8 Suvin, *Metamorphoses of Science Fiction*, p. 61.

9 The conventional high-cultural repudiation of SF – its stigmatization of the purely formulaic (which reflects the original sin of the form in its origins in the pulps), complaints about the absence of complex and psychologically "interesting" characters (a position which does not seem to have kept pace with the postcontemporary crisis of the "centred subject"), a yearning for original literary styles which ignores the stylistic variety of modern SF (as Philip K. Dick's defamiliarization of spoken American) – is probably not a matter of personal taste, nor is it to be addressed by way of purely aesthetic arguments, such as the attempt to assimilate selected SF works to the canon as such. We must here identify a kind of generic revulsion, in which this form and narrative discourse is the object of psychic resistance as a whole and the target of a kind of literary "reality principle". For such readers, in other words, the Bourdieu-style rationalizations which rescue high literary forms from the guilty associations of unproductiveness and sheer diversion and which endow them with socially acknowledged justification, are here absent. It is true that this is also a reply which the readers of fantasy could very well address to the readers of SF itself (see below, Chapter 5).

them. Indeed, in the case of the Utopian texts, the most reliable political test lies not in any judgment on the individual work in question so much as in its capacity to generate new ones, Utopian visions that include those of the past, and modify or correct them.

Yet this undecidability is in reality a deep-structural rather than a political one; and it explains why so many commentators on Utopia (such as Marx and Engels themselves, with all their admiration for Fourier¹⁰) should have emitted contradictory assessments on the matter. Another Utopian visionary – Herbert Marcuse, surely the most influential Utopian of the 1960s – offers an explanation for this ambivalence in an earlier argument whose official subject is culture rather than Utopia as such.¹¹ The problem is however the same: can culture be political, which is to say critical and even subversive, or is it necessarily reappropriated and coopted by the social system of which it is a part? Marcuse argues that it is the very separation of art and culture from the social – a separation that inaugurates culture as a realm in its own right and defines it as such – which is the source of art's incorrigible ambiguity. For that very distance of culture from its social context which allows it to function as a critique and indictment of the latter also dooms its interventions to ineffectuality and relegates art and culture to a frivolous, trivialized space in which such intersections are neutralized in advance. This dialectic accounts even more persuasively for the ambivalencies of the Utopian text as well: for the more surely a given Utopia asserts its radical difference from what currently is, to that very degree it becomes, not merely unrealizable but, what is worse, unimaginable.¹²

10 Marx and Engels, *Selected Correspondence* (Moscow, 1975): for example, October 9, 1866 (to Kugelmann) attacking Proudhon as a petty-bourgeois Utopian, "whereas in the Utopias of a Fourier, an Owen, etc., there is the anticipation and imaginative expression of a new world" (p. 172). And see also Engels: "German theoretical Socialism will never forget that it stands on the shoulders of Saint-Simon, Fourier and Owen, three men who despite their fantasies and utopianism are to be reckoned among the most significant minds of all times, for they anticipated with genius countless matters whose accuracy we now demonstrate scientifically" (quoted in Frank and Fritzie Manuel, *Utopian Thought in the Western World* [Cambridge, MA, 1979], p. 702). Benjamin was also a great admirer of Fourier: "Il attendait la libération totale de l'avènement du jeu universalisé au sens de Fourier pour lequel il avait une admiration sans borne. Je ne sache pas d'homme qui, de nos jours, ait vécu aussi intimement dans le Paris saint-simonien et fouriériste." Pierre Klossowski, "Lettre sur Walter Benjamin", *Tableaux vivants* (Paris: Gallimard, 2001), p. 87. And Barthes was another such passionate reader (see Chapter 1, note 5).

11 See "On the Affirmative Character of Culture", in *Negations* (Boston, 1968).

12 From another standpoint, this discussion of the ambiguous reality of culture (that is to say, in our context, of Utopia itself) is an ontological one. The presumption is that Utopia, whose business is the future, or not-being, exists only in the present, where it leads the relatively feeble life of desire and fantasy. But this is to reckon without the amphibiousness of being and its temporality: in respect of which Utopia is philosophically analogous to the trace, only from the other end of time. The aporia of the trace is to belong to past and present all at once, and thus to constitute a mixture of being and not-being quite different from the traditional category of

This does not exactly leave us back at our beginning, in which rival ideological stereotypes sought to pass this or that absolute political judgment on Utopia. For even if we can no longer adhere with an unmixed conscience to this unreliable form, we may now have recourse to that ingenious political slogan Sartre invented to find his way between a flawed communism and an even more unacceptable anti-communism. Perhaps something similar can be proposed to fellow-travelers of Utopia itself: indeed, for those only too wary of the motives of its critics, yet no less conscious of Utopia's structural ambiguities, those mindful of the very real political function of the idea and the program of Utopia in our time, the slogan of anti-anti-Utopianism might well offer the best working strategy.

Becoming and thereby mildly scandalous for analytical Reason. Utopia, which combines the not-yet-being of the future with a textual existence in the present is no less worthy of the archaeologies we are willing to grant to the trace. For a philosophical discussion of the latter see Paul Ricoeur, *Time and Narrative*, Volume III (Chicago, 1988), pp. 119–120.

Varieties of the Utopian

It has often been observed that we need to distinguish between the Utopian form and the Utopian wish: between the written text or genre and something like a Utopian impulse detectable in daily life and its practices by a specialized hermeneutic or interpretive method. Why not add political practice to this list, inasmuch as whole social movements have tried to realize a Utopian vision, communities have been founded and revolutions waged in its name, and since, as we have just seen, the term itself is once again current in present-day discursive struggles? At any rate, the futility of definitions can be measured by the way in which they exclude whole areas of the preliminary inventory.¹

In this case, however, the inventory has a convenient and indispensable starting point: it is, of course, the inaugural text of Thomas More (1517), almost exactly contemporaneous with most of the innovations that have seemed to define modernity (conquest of the New World, Machiavelli and modern politics, Ariosto and modern literature, Luther and modern consciousness, printing and the modern public sphere). Two related genres have had similar miraculous births: the historical novel, with *Waverley* in 1814, and Science Fiction (whether one dates that from Mary Shelley's *Frankenstein* in the same years [1818] or Wells' *The Time Machine* in 1895).

Such generic starting points are always somehow included and *aufgehoben* in later developments, and not least in the well-known shift in Utopias from space

¹ But see, for an authoritative statement, Lyman Tower Sargent, "The Three Faces of Utopianism", *Minnesota Review*, Vol. 7.3 (1967), pp. 222–230 and "The Three Faces of Utopianism Revisited", *Utopian Studies* 5.1 (1994), pp. 1–37. As Utopian studies are a relatively recent disciplinary field, bibliographies of theoretical interventions in it are still relatively rare: but see those in Tom Moylan, *Demand the Impossible* (New York, 1986) and in Barbara Goodwin and Keith Taylor, *The Politics of Utopia* (London, 1982). The journal *Utopian Studies* can be consulted for recent developments in this area. Theoretical contributions to the study of Science Fiction are another matter: see Veronica Hollinger's splendid overview, "Contemporary Trends in Science Fiction Criticism, 1980–1999" (*Science Fiction Studies*, No. 78 [July 1999], pp. 232–262), and for a more Francophone perspective, the bibliography in Richard Saint-Gelais, *L'Empire du pseudo* (Quebec City, 1999). For both, of course, we are fortunate to be able to draw on the superb *Encyclopedia of Science Fiction* of John Clute and Peter Nicholls (New York, 1995); and for Utopias, on the *Dictionary of Literary Utopias* of Vita Fortunati and Raymond Trousson (Paris, 2000).

to time, from the accounts of exotic travelers to the experiences of visitors to the future. But what uniquely characterizes this genre is its explicit intertextuality: few other literary forms have so brazenly affirmed themselves as argument and counterargument. Few others have so openly required cross-reference and debate within each new variant: who can read Morris without Bellamy? or indeed Bellamy without Morris? So it is that the individual text carries with it a whole tradition, reconstructed and modified with each new addition, and threatening to become a mere cipher within an immense hyper-organism, like Stapledon's minded swarm of sentient beings.

Yet the lifework of Ernst Bloch is there to remind us that Utopia is a good deal more than the sum of its individual texts. Bloch posits a Utopian impulse governing everything future-oriented in life and culture; and encompassing everything from games to patent medicines, from myths to mass entertainment, from iconography to technology, from architecture to eros, from tourism to jokes and the unconscious. Wayne Hudson expertly summarizes his magnum opus as follows:

In *The Principle of Hope* Bloch provides an unprecedented survey of human wish pictures and day dreams of a better life. The book begins with little day dreams (part I), followed by an exposition of Bloch's theory of anticipatory consciousness (part II). In part III Bloch applies his utopian hermeneutics to the wish pictures found in the mirror of ordinary life: to the utopian aura which surrounds a new dress, advertisements, beautiful masks, illustrated magazines, the costumes of the Ku Klux Klan, the festive excess of the annual market and the circus, fairy tales and kolportage, the mythology and literature of travel, antique furniture, ruins and museums, and the utopian imagination present in dance, pantomime, the cinema and the theatre. In part IV Bloch turns to the problem of the construction of a world adequate to hope and to various 'outlines of a better world'. He provides a 400 page analysis of medical, social, technical, architectural and geographical utopias, followed by an analysis of wish landscapes in painting, opera and poetry; utopian perspectives in the philosophies of Plato, Leibniz, Spinoza and Kant, and the utopianism implicit in movements agitating for peace and leisure. Finally, in part V Bloch turns to wish pictures of the fulfilled moment which reveal 'identity' to be the fundamental supposition of anticipatory consciousness. Once again, the sweep is breathtaking as Bloch ranges over happy and dangerous experiences in ordinary life; the problem of the antinomy between the individual and the community; the works of the young Goethe, *Don Giovanni*, *Faust*, *Don Quixote*, the plays of Shakespeare; morality and intensity in music; hope pictures against death, and man's increasing self-injection into the content of religious mystery.²

2 Wayne Hudson, *The Marxist Philosophy of Ernst Bloch* (New York, 1982), p. 107. We must also note Ruth Levitas' critiques of the notion of a Utopian "impulse" in her *Concept of Utopia* (Syracuse, 1990), pp. 181–183. This book, central to the constitution of Utopian studies as a

We will return to Bloch shortly; but it should already be clear that his work raises a hermeneutic problem. Bloch's interpretive principle is most effective when it reveals the operation of the Utopian impulse in unsuspected places, where it is concealed or repressed. But what becomes, in that case, of deliberate and fully self-conscious Utopian programs as such? Are they also to be taken as unconscious expressions of something even deeper and more primordial? And what becomes of the interpretive process itself and Bloch's own philosophy of the future, which presumably no longer needs such decoding or reinterpretation? Yet the Utopian exegete is not often herself the designer of Utopias, and no Utopian program bears Bloch's own name.³ There is here at work the same hermeneutic paradox Freud confronted when, searching for precursors of his dream analysis, he finally identified one obscure aboriginal tribe for whom all dreams had sexual meanings – except for overtly sexual dreams as such, which meant something else.

We would therefore do better to posit two distinct lines of descendency from More's inaugural text: the one intent on the realization of the Utopian program, the other an obscure yet omnipresent Utopian impulse finding its way to the surface in a variety of covert expressions and practices. The first of these lines will be systemic, and will include revolutionary political practice, when it aims at founding a whole new society, alongside written exercises in the literary genre. Systemic will also be those self-conscious Utopian secessions from the social order which are the so-called intentional communities; but also the attempts to project new spatial totalities, in the aesthetic of the city itself.

The other line of descent is more obscure and more various, as befits a protean investment in a host of suspicious and equivocal matters: liberal reforms and commercial pipedreams, the deceptive yet tempting swindles of the here and now, where Utopia serves as the mere lure and bait for ideology (hope being after all also the principle of the cruelest confidence games and of hucksterism as a fine art). Still, perhaps a few of the more obvious forms can be identified: political and social theory, for example, even when – especially when – it aims at realism and at the eschewal of everything Utopian; piecemeal social democratic and “liberal” reforms as well, when they are

field in its own right, argues for a structural pluralism in which, according to the social constructions of desire in specific historical periods, the three components of form, content and function are combined in distinct and historically unique ways: “The main functions identified are compensation, criticism and change. Compensation is a feature of abstract, ‘bad’ Utopia for Bloch, of all utopia for Marx and Engels and of ideology for Mannheim. Criticism is the main element in Goodwin's definition. Change is crucial for Mannheim, Bauman and Bloch. Utopia may also function as the expression of education of desire, as for Bloch, Morton and Thompson, or to produce estrangement, as for Moylan and Suvin. If we define utopia in terms of [only] one of these functions we can neither describe nor explain the variation.” (p. 180)

³ Tom Moylan pertinently reminds me that Bloch already had a concrete Utopia; it was called the Soviet Union.

merely allegorical of a wholesale transformation of the social totality. And as we have identified the city itself as a fundamental form of the Utopian image (along with the shape of the village as it reflects the cosmos),⁴ perhaps we should make a place for the individual building as a space of Utopian investment, that monumental part which cannot be the whole and yet attempts to express it. Such examples suggest that it may be well to think of the Utopian impulse and its hermeneutic in terms of allegory: in that case, we will wish in a moment to reorganize Bloch's work into three distinct levels of Utopian content: the body, time and collectivity.

Yet the distinction between the two lines threatens to revive the old and much-contested philosophical aim of discriminating between the authentic and the inauthentic, even where it aims in fact to reveal the deeper authenticity of the inauthentic as such. Does it not tend to revive that ancient Platonic idealism of the true and false desire, the true and false pleasure, genuine satisfaction or happiness and the illusory kind? and this at a time when we are more inclined to believe in illusion than in truth in the first place.⁵ As I tend to sympathize with this last, more postmodern, position, and also wish to avoid a rhetoric which opposes the reflexive or self-conscious to its unreflexive opposite number, I prefer to stage the distinction in more spatial terms. In that case, the properly Utopian program or realization will involve a commitment to closure (and thereby to totality): was it not Roland Barthes who

4 See Claude Lévi-Strauss, "Do Dual Organizations Exist?" in *Structural Anthropology I* (Chicago, 1983 [1958]); and also Pierre Bourdieu, *Outline of a Theory of Practice* (Cambridge, 1977 [1972]).

5 See Gilles Deleuze, *Cinéma II* (Paris, 1985 [1952]), Chapter VI, on "le faux"; and also Jean-Paul Sartre, *Saint Genêt* (New York, 1983), on "le toc", pp. 358ff.

observed, of Sade's Utopianism, that "here as elsewhere it is closure which enables the existence of system, which is to say, of the imagination"?⁶

But this is a premise that is not without all kinds of momentous consequences. In More, to be sure, closure is achieved by that great trench the founder causes to be dug between the island and the mainland and which alone allows it to become Utopia in the first place: a radical secession further underscored by the Machiavellian ruthlessness of Utopian foreign policy which – bribery, assassination, mercenaries and other forms of *Realpolitik* – rebukes all Christian notions of universal brotherhood and natural law and decrees the foundational difference between them and us, foe and friend, in a peremptory manner worthy of Carl Schmitt and characteristic in one way or another of all subsequent Utopias intent on survival within a world not yet converted to Bellamy's world state: as witness the sad fate of Huxley's *Island* or the precautions that are required by situations as different as Skinner's Walden communities or Kim Stanley Robinson's Mars.⁷

Totality is then precisely this combination of closure and system, in the name of autonomy and self-sufficiency and which is ultimately the source of that otherness or radical, even alien, difference already mentioned above and to which we will return at some length. Yet it is precisely this category of totality that presides over the forms of Utopian realization: the Utopian city, the Utopian revolution, the Utopian commune or village, and of course the Utopian text itself, in all its radical and unacceptable difference from the more lawful and aesthetically satisfying literary genres.

Just as clearly, then, it will be this very impress of the form and category of totality which is virtually by definition lacking in the multiple forms invested by Bloch's Utopian impulse. Here we have rather to do with an allegorical process in which various Utopian figures seep into the daily life of things and people and afford an incremental, and often unconscious, bonus of pleasure unrelated to their functional value or official satisfactions. The hermeneutic procedure is therefore a two-step method, in which, in a first moment, fragments of experience betray the presence of symbolic figures – beauty,

6 Roland Barthes, *Sade, Fourier, Loyola* (Paris, 1971), p. 23.

7 And we might have added the historical tragedy of Winstanley and St George's Hill (along with the fate of Goetz's Utopian commune in Sartre, *Le Diable et le bon dieu*: it is true that this last is imposed rather than intentional, which was presumably the other point the philosopher of freedom and praxis wanted to make). As is well known, Huxley's late work, *Island* (1962), represents his attempt to rectify the satiric *Brave New World* of 1932 with the construction of a "serious" (although narrative) contribution to the Utopian genre. B.F. Skinner (1904–1990), one of the more idiosyncratic American theorists of behaviorism and the inventor of the so-called Skinner box, wrote a major Utopia in *Walden Two* (1948), in which (in my opinion) "negative conditioning" plays little part: see the brief discussion in Chapter 4 below. Kim Stanley Robinson (1952–) is the author of not one, but two Utopian cycles, the so-called Orange County trilogy (1984–1990) and the Mars trilogy (1992–1996), with a third one, centering on ecological disaster and its Utopian possibilities, on the way. On the Mars trilogy, see Part Two, Essay 12, below).

wholeness, energy, perfection – which are only themselves subsequently to be identified as the forms whereby an essentially Utopian desire can be transmitted. It will be noted that in this Bloch often appeals to classical aesthetic categories (which are themselves ultimately theological ones as well), and to that degree his hermeneutic may also be grasped as some final form of German idealist aesthetics as it exhausts itself in the late twentieth century and in modernism. Bloch had far richer and more varied tastes than Lukács, and attempted to accommodate popular and archaic culture, modernist as well as realist and neoclassical texts, into his Utopian aesthetics: but the latter is perfectly capable of assimilating postmodern and non-European, mass-cultural tastes, and this is why I have proposed to reorganize his immense compendium in a new and tripartite way (body, time and collectivity) which corresponds more closely to the levels of contemporary allegory.

Materialism is already omnipresent in an attention to the body which seeks to correct any idealism or spiritualism lingering in this system. Utopian corporeality is however also a haunting, which invests even the most subordinate and shamefaced products of everyday life, such as aspirins, laxatives and deodorants, organ transplants and plastic surgery, all harboring muted promises of a transfigured body. Bloch's reading of these Utopian supplements – the doses of utopian excess carefully measured out in all our commodities and sewn like a red thread through our practices of consumption, whether sober and utilitarian or frenzied-addictive – now rejoins Northrop Frye's Blakean myths of eternal bodies projected against the sky. Meanwhile the overtones of immortality that accompany these images seem to move us urgently onwards towards the temporal level, becoming truly Utopian only in those communities of the preternaturally long-lived,⁸ as in Shaw's *Back to Methuselah*, or the immortal, as in Boorman's film *Zardoz* (1974), significantly offering fodder for the anti-Utopians in the accompanying deterioration of the Utopian vision: the suicidal tedium of Shaw's long-lived elders, the sexless ennui of the inhabitants of *Zardoz's* Vortex. Meanwhile, liberal politics incorporates portions of this particular impulse in political platforms offering enhanced medical research and universal health coverage, although the appeal to eternal youth finds a more appropriate place on the secret agenda of the Right and the wealthy and privileged, in fantasies about the traffic in organs and the technological possibilities of rejuvenation therapy. Corporeal transcendence then also finds rich possibilities in the realm of space, from the streets of daily life and the rooms of dwelling and work place, to the greater locus of the city as in ancient times it reflected the physical cosmos itself.

But the temporal life of the body already resituates the Utopian impulse in what is Bloch's central concern as a philosopher, namely the blindness of all traditional philosophy to the future and its unique dimensions, and the

8 See Part Two, Essay 7, "Longevity as Class Struggle".

denunciation of philosophies and ideologies, like Platonic anamnesis, stubbornly fixated on the past, on childhood and origins.⁹ It is a polemical commitment he shares with existential philosophers in particular, and perhaps more with Sartre, for whom the future is praxis and the project, than with Heidegger, for whom the future is the promise of mortality and authentic death; and it separates him decisively from Marcuse, whose Utopian system drew significantly, not merely on Plato, but fully as much on Proust (and Freud), to make a fundamental point about the memory of happiness and the traces of Utopian gratification that survive on into a fallen present and provide it with a “standing reserve” of personal and political energy.¹⁰

But it is worth pointing out that at some point discussions of temporality always bifurcate into the two paths of existential experience (in which questions of memory seem to predominate) and of historical time, with its urgent interrogations of the future. I will argue that it is precisely in Utopia that these two dimensions are seamlessly reunited and that existential time is taken up into a historical time which is paradoxically also the end of time, the end of history. But it is not necessary to think of this conflation of individual and collective time in terms of any eclipse of subjectivity, although the loss of (bourgeois) individuality is certainly one of the great anti-Utopian themes. But ethical depersonalization has been an ideal in any number of religions and in much of philosophy as well; while the transcendence of individual life has found rather different representations in Science Fiction, where it often functions as a readjustment of individual biology to the incomparably longer temporal rhythms of history itself. Thus, the extended life spans of Kim Stanley Robinson’s Mars colonists allow them to coincide more tangibly with long-term historical evolutions, while the device of reincarnation, in his alternate history *Years of Rice and Salt*, affords the possibility of reentering the stream of history and development over and over again.¹¹ Yet a third way in which individual and collective time come to be identified with each other is in the very experience of everyday life, according to Roland Barthes the quintessential sign of utopian representation: “la marque de l’Utopie, c’est le quotidien”.¹² Where biographical time and the dynamics of history diverge, this day-by-day life in successive instants allows the existential to fold back into the space of the collective, at least in Utopia, where death is measured off in generations rather than in biological individuals.

9 See Ernst Bloch’s attack on anamnesis in *The Principle of Hope* (Cambridge, MA, 1986 [1959]), p. 18.

10 Herbert Marcuse, *Eros and Civilization* (New York, 1962), p. 18 and Chapter 11.

11 *Years of Rice and Salt* (2002) offers the chronicle of a world from which Europe and Christianity have been eliminated by the Black Death in the fourteenth century AD, a world in which a “native American” high civilization flourishes in the Western hemisphere and China and Islam have become the major subjects of a history that concludes with equivalents of “our” First World War, “our” revolutionary 1960s, and (hopefully) a different kind of future from our own.
